

TO WHOM IT MAY CONCERN

**DO YOU HAVE A NEED FOR HEAVY DUTY HIGH SPEED GATE
AUTOMATION OR CARPARK BARRIER ARMS?**

I am a Wellington based electrical contractor specializing in gate automation and have developed a range of high speed sliding gate automation and barrier arms for commercial use.

The gate motors are of a robust construction suited for high security areas and having enclosures which are hot dipped galvanized for rust protection.

Electrically the features are in my opinion superior to any high speed geared motor available in New Zealand. The Hi Speed motor is more powerful than anything on the current NZ market. There are 2 sizes to choose from 1000kg or 2000kg.

The barrier arms are made of aluminum and with the use of speed drive technology as in the gate motors the amount of moving parts is heavily reduced, only the reduction gearbox no spring pulleys belts etc.

Both of these have been designed for simple installation and simple setup. One of the biggest features is in the logic for both, which can potentially reduce many callouts after power failure. No other automation has this feature

Units are made to order.

We have also developed wireless rolling code digital keypads for those after thought areas where you can't get cables to, UV and weather proof.
